

Recommendation Letter

March 2, 2026

Denys is a responsible and proactive Rust Engineer with strong ownership of his work. He consistently delivers high-quality solutions and contributes valuable ideas to improve architecture, performance, and development processes. He is genuinely invested in both the product and the team's success.

He has solid expertise in distributed and high-load systems and approaches development in a structured, thoughtful way. Denys actively participates in technical discussions, carefully evaluates trade-offs, and collaborates effectively in pair programming to optimize performance.

Beyond his technical skills, Denys is open, positive, and easy to work with. He communicates complex ideas clearly and contributes to a culture of knowledge sharing by leading internal tech talks.

I confidently recommend Denys as a dedicated engineer and strong team player who would bring real value to any company.

Sincerely,
Anna Yevstiefieieva
